

Formulation

FABRIC SOFTENER, APPROXIMATELY 15 %

1.5.0/1900130

INGREDIENTS:

	INGREDIENTS	% W/W
1	Water	81,5
	Dyestuff, 1%	0,5
	REWOQUAT® W 90	17,0
	Perfume oil (Parfum)	0,6
	Calcium Chloride, 25 %	ca. 0,2

PROCESSING

Heat the water to approximately 45°C. Add the dyestuff and the antifoam solution if required. Slowly disperse with constant agitation the REWOQUAT W 90, preheated to approximately 50°C. Add only enough calcium chloride solution at one time to keep the dispersion stirrable. Stir for about 20 minutes and cool to approximately 25°C, adding the perfume oil at between 30 - 35°C. Finally adjust to the required viscosity with calcium chloride.

REMARKS

Stir continuously throughout the preparation process. As far as possible avoid air entrainment. A substantial increase in the amount of calcium chloride could lead to separation of the dispersion. A dispersion with a preferred viscosity of approximately 80 mPas (+/- 20 mPas). Brookfield LVT, Sp 1, 30 rpm.
